Sine Control Int'l Corp.
3407 West Olive, #108
Burbank, CA 91505

Gentlemen:

I wish to bring you up to date and thank you once again for installing the Sine Control devices in our plant. The results have been outstanding! Three days after you installed the units, in August, 1980, we noticed the change. Our 40 hp mill, which would burn a set of contacts every three months, stopped arcing. Our 15 hp hydraulic pump ran so hot we couldn't touch it, and is now running at normal temperature and the noise is cut in half. Our extrusion machines ran so hot they had to be shut down during the shifts. They now run normally.

Since installing your units, our production has risen over 25%. Our shifts operate straight through and we have had no occasion to replace any electrical motors or parts. In addition to the above, and perhaps best of all, our electrical costs (consumption) have maintained a consistent reduction of 15.5%. Copies of our billings are enclosed.

If you need any further references, please feel free to call. Thanks again.

Sincerely,

John Wilson
