HIGH QUALITY ULTRASOUND, CT
AND MRI MEDICAL EQUIPMENT

Dear Tom,

I would like you to know I am not in the habit of writing endorsement letters. In fact I don't remember the last one I wrote. That said I felt compelled to write you about the effect the Sine Control device has had on our Toshiba network copier. As you are aware Toshiba puts a surge suppression device on this machine as part of their setup. I believed they had done their homework on surge suppression that is why I was expecting the installation of your device to have no effect on our machine's problems. I am extremely pleased to be able to say I couldn't have been more wrong!

Before we installed the Sine Control device we were experiencing jams on a daily basis. In fact on heavy use days when we were printing a lot of documents we could hardly get through an hour with our removing jams and restarting jobs. We had called the service people on numerous occasions but they pretty much said they had to observe the jams in order to fix the problem. That actually happened on a couple of occasions but as you know the fix never did. Never did that is until, we installed our Sine Control TVSS Device. The difference is like night and day. The frequency of paper jams on our copier is now measured in weeks instead of number per day. This device **WORKS!**

Sincerely,

A handwritten signature in black ink, appearing to read 'Chuck Stegenga', written over a horizontal line.
