

# digital

Thank you for the use of the 'sine-control' devices. Our environmental specialist, Jim Owen, feels that the success of our equipment at the recent Liberal Leadership convention in Ottawa can be attributed to the use of these devices.

Comparable equipment used by other vendors experienced consistent hardware failure that Jim feels was caused by arcing and the lack of power suppression devices.

While it is Digital's policy not to recommend one single vendor, Jim feels we could use your product for solutions in dealing with our customers who experience power problems and ourselves experience a high degree of confidence in the outcome.

With the success of our venture attributed to your devices both Jim and I feel a favorable outcome in seeing more 'sine-control' devices in the field.
